How do I counterbalance my arm?

1. **IMPORTANT!**
   - Monitor must be on arm
   - Arm must be in mount

   Press the arm down to approximately parallel with the desk prior to turning the strength adjustment screw.

   - If the arm drifts upward, turn the adjustment screw clockwise.
   - If the arm drifts downward, turn the adjustment screw counterclockwise.

   Depending on the weight of your monitor, you may have to make 15-20 turns.

2. **In some instances,** further counterbalance adjustments are needed to allow the arm’s instant height adjustment function to work properly.

   - If your arm is not staying in position after performing step 1, follow these steps:
     - With arm in raised position, tighten set screw (A).
     - With arm in horizontal position, tighten set screw (B).

   Do not over tighten screws.
